

Sphagnum Moss Harvest and Production

Sphagnum moss is revolutionizing pool and spa use with naturally comfortable water and less maintenance time.

The sphagnum moss grows in New Zealand's many bogs.

The moss is carefully hand-harvested and is a renewable resource.

The moss is bundled into white bags for transport.

The bags of moss are airlifted out of bogs and onto trucks.

Sphagnum Moss Harvest and Production

Next, the moss is dried and petals are separated from the stems.

The moss is cleaned of stems and other foreign objects before being compressed into PoolNaturally or SpaNaturally refills.

PoolNaturally and SpaNaturally moss refills have no unhealthy side effects like dry skin, burning eyes, or chemical odors.

PoolNaturally® SpaNaturally®

The PoolNaturally and SpaNaturally family of products.
